

SAGECITY

SageCity is an innovation company which harnesses blockchain technology to build applications and tools which are substantially more time- and cost-efficient than traditional technologies.

Solution Development

When developing solutions, we want to provide our clients with scalable and adaptable technology. We want to give them control and the opportunity to maximise their potential.

We support clients at every stage. From identifying needs within their enterprise to designing and building the solution.

Because of the versatility of our technology, we can introduce solutions into a project at any stage of development.

Team

Collectively, we have 25 years of experience in blockchain technology and development. This is impressive since the industry has existed for just 10 years. We are a strong team of academics, developers, and entrepreneurs who are passionate about using blockchain technology to make a real and meaningful impact in the world.

Commercial Products

We offer a range of toolkits and products that are “ready-to-go” for certain enterprise operations. Especially around payment management and data.

Our internal payments system (IPS) is our flagship product. It provides a way to transact and settle money within ecosystems instantly and at zero cost.

Knowledge-Driven Operations

We want to build the processes and tools of the future. And we see that being achieved primarily through the power of blockchain technology.

We are focused on gaining a wide range of knowledge and experience. In different industries, markets, and organisations. This way, we can build valuable technology that truly addresses a pressing need.
